Everything You Need to Know About USB and Serial Interfaces

Presented by N6TV

n6tv@arrl.net
Presentation Overview

- Legacy PC Serial Ports
- USB Ports and Devices
- USB-to-Serial Adapters
- Using the Device Manager
- Managing Serial Port Numbers
- Using Serial Ports for CW / FSK / PTT Keying
- Sharing Serial Ports
- USB Sound Cards
- Q & A
Legacy PC Serial Ports

- Originally a 25-pin male D-SUB connector (DB-25M), used with dial-up modems
- Smaller 9-pin male serial connector became standard (DE-9M) for serial, DB-25F for printers
Life was Simple

- One or two male DE-9 connectors on PC
- Accessed as COM1: or COM2:
- One DE-9 “CAT” or “RS232” connector on radio
  - Female: Elecraft IC-7700 & IC-7800
  - Male: Yaesu Kenwood
“Real” serial and parallel ports disappear, replaced by USB ports

Notebook computers: PCMCIA, PC Card, ExpressCard slots for serial adapters disappear

Radios (until recently) still had 9-pin serial ports

Peripherals are still using 9-pin serial ports
  - Rotator controllers, SteppIR antenna controllers, some band decoders, etc.

Common Solution: USB-to-Serial adapters
USB 2.0 and 3.0 Ports

- Standard connector on most PCs and MACs

Type-A SuperSpeed

Type-B SuperSpeed
USB-to-Serial Adapters

- Reliability and Compatibility Varies Greatly
  1. Edgeport – Excellent, stable, supports MMTTY directly
  2. Eltima – Included with microHAM interfaces
  3. FTDI – very good, stable, requires EXTFSK for MMTTY. Used internally by Elecraft K3.
  4. Silicon Labs (built in to Icom, Kenwood, Yaesu)
  5. Prolific – AVOID! Uninstall drivers, recycle.
Digi International Edgeport/4

- One USB 2.0 Type B connector
- Four independent DE-9M serial ports
- Windows automatically finds and installs drivers
Digi International Edgeport/8

- One USB 2.0 Type B connector
- Eight independent DE-9M serial ports
- Windows automatically finds and installs drivers
microHAM uses Eltima drivers

microHAM MK2R+

- One USB Type B connector
- Custom Eltima serial port device drivers
- Custom cables for transceiver ports
- Virtual serial ports created by microHAM “Router”
Recommended FTDI USB-to-Serial Adapters

FTDI CHIPI-X10 - $15

GearMo 2-port - $30

GearMo 4-port - $40
Prolific USB-to-Serial Adapters

- Widely available, cheap (but many counterfeits)
- Device Driver does not play well with others
- Please DO NOT USE them, ever
- **Uninstall** any Prolific device drivers with Device Manager
- Devices often look like this:
Connecting USB-to-Serial Adapters

- Connect FTDI, Elecraft, or Edgeport device to PC
- Windows (usually) locates and installs appropriate device driver(s)
- COM ports assigned sequentially
- Use Windows Device Manager to view assigned COM Port number
Connecting USB Radios / Devices

- **Important:** Install the manufacturer’s device driver first, *then* connect the device
  - Icom, Kenwood, Yaesu, microHAM
  - Usually not required for Elecraft (FTDI)

- If you forget and connect radio first, use Device Manager to uninstall “Unknown Device”, then start over

- COM port numbers assigned sequentially
Using the Windows Device Manager

- Right click on Windows Start Button
- Click Device Manager
- or-
- Run: devmgmt.msc

Important Tip: Always set the System Environment Variable devmgr_show_nonpresent_devices to 1
Setting System Environment Variable

- Type “Environment” in Windows Search box or Windows Settings Search box.

- Click “Edit the System Environment Variables”
Step 1 – Under **Advanced** tab click **Environment Variables**...
Step 2 – Under **System variables**, click **New**…
Step 3 – Add the new environment variable

Name: devmgr_show_nonpresent_devices
Value: 1

Click OK, then start Windows Device Manager
Step 4 – in Device Manager:
Select View → Show Hidden Devices
Expand **Ports** section
Right click offline devices, Properties
Click **Driver Tab**
Check that Driver Provider is not Prolific

- If you see **Prolific**, click **Uninstall Device**
Uninstall the Prolific Device AND Delete the Driver Software

![Uninstall Device dialog box](image)
If Driver is FTDI, go to **Port Settings** tab
Click **Advanced...** button
FTDI Default Options – not good
Change the FTDI Options To This

Miscellaneous Options

- Serial Enumerator
- Serial Printer
- Cancel If Power Off
- Event On Surprise Removal
- Set RTS On Close
- Disable Modem Ctrl At Startup (checked)
- Enable Selective Suspend
- Selective Suspend Idle Timeout (secs): 5
Another USB Dev. Management Tool: NirSoft’s USBDeview

- Stands for USB Device View
- https://www.nirsoft.net/utils/usb_devices_view.html
- Scroll Way Down to the “Feedback” section to find download link:

Feedback

If you have any problem, suggestion, comment, or you found a bug in my utility, you can send a message to nirsofer@yahoo.com

Download USBDeview

Download USBDeview for x64 systems

</table>
Managing COM Port Numbers

- Over time, ever increasing unique COM port numbers are assigned by Windows, difficult to keep track
- Some software doesn’t support COM13: or higher
- Suggestion: renumber serial ports “left to right” to match your station layout, starting with transceivers
- First, use Windows Device Manager to uninstall all serial devices that you no longer use
- Right click on remaining COM ports, Properties, Port Settings tab. Click Advanced… button
- Renumber ports sequentially, COM3:, COM4:, COM5:, etc., “left to right”
Renumbering Serial Ports

Advanced Settings for COM5

- COM Port Number: COM5
  - COM1 (in use)
  - COM2 (in use)
  - COM3 (in use)
  - COM4 (in use)

- USB Transfer Sizes
- Select lower settings to correct rates.
- Select higher settings for fast receive, transmit (Bytes):
- Transmit (Bytes):
- EM Options
  - Select lower settings to correct latency timers (msec):
  - Latency Timer (msec):
- Timeouts
  - Minimum Read Timeout (msec):
  - Minimum Write Timeout (msec):

- Miscellaneous Options
  - Serial Enumerator
  - Serial Printer
  - Cancel If Power Off
  - Event On Surprise Removal
  - Set RTS On Close
  - Disable Modern Ctrl At Startup
  - Enable Selective Suspend
  - Selective Suspend Idle Timeout (secs): 5

OK
Cancel
Defaults
What does “In Use” Mean?

- It means this COM port number was assigned to some device, maybe years ago.
- It usually does *not* mean that you can’t use it during reassignment, especially if it is “grayed out” (hidden).
- Uninstalling disconnected devices first will help.
- Usually safe to ignore this warning and click YES:

![Image of Communications Port Properties window]

This COM name is being used by another device (such as another com port or modem). Using duplicate names can lead to inaccessible devices and changed settings. Do you want to continue?
What program is currently using my serial port?

- Use Windows Process Explorer
- On Windows 10, run procexp64.exe as Administrator
- Click Search button (binoculars icon)
- Enter one of the following partial search strings:
  - \Device\VCP - FTDI virtual serial ports
  - \Device\Edg - Edgeport virtual serial ports
  - \Device\Ser - Hardware serial ports
  - \Device\Sil - Icom/Kenwood/Yaesu Silicon Labs ports
Win-Test (wt.exe) has opened the FTDI Serial Port
OmniRig (e.g. WSJT-X, Log4OM) has opened the FTDI Serial Port
Not sure what to search for?

- Open a program known to use a particular serial port
- In Process Explorer, *drag* the “Find Windows Process” icon on top of the program window

Process Explorer will jump to the process corresponding to that program window
Select View, Lower Pane View, Handles, then sort by Name
Computer CW, PTT, and FSK RTTY Keying Using Serial Port pins (DTR=CW, RTS=PTT)

- A simple hardware keying circuit, used for decades:
Elecraft K3 / K3S keying via serial port

- First transceiver to include computer keying circuit *inside the radio*
- Does not use RTS and DTR pins for RS232 “Handshaking”, freeing them for other purposes
- In K3, set `CONFIG:PTT-KEY` to `RTS-DTR` (vs. `OFF-OFF`)
- Works the same over a standard serial cable (CONFIG:RS232 = 38400) or the K3S USB connection (CONFIG:RS332 = USB)
- To prevent unwanted transmissions when PC reboots, change FTDI Port Settings:
  - Uncheck “Serial Enumerator”
  - Check “Disable Modem Ctrl At Startup”
ICOM Copies Elecraft, Adds FSK Keying

- CW, PTT, and FSK keying OK over USB virtual serial port
- Supported by IC-7300, IC-7610, IC-7850, IC-7851
- IC-7300 generates just one virtual serial port
- IC-7610, IC-7850, IC-7851 generate two virtual serial ports:

To keep it simple use DTR pin for keying, RTS pin for PTT
- Use port “B” for MMTTY exclusively
- Mnemonic: CW : DTR : FSK • PTT : RTS : S end
ICOM: Determining COM Port A and B

- Use Windows Device Manager, right click on first COM port, Properties, Details tab, Device Instance Path, check last letter.
ICOM IC-7300

- USB cable provides one virtual serial port
- In IC-7300 SET > Connectors menu:
  Set USB Keying (CW) to DTR
  -or-
  Set USB Keying (RTTY) to DTR
- Set USB Send to RTS
- Logging Software, rig control Port (USB), set DTR=CW, RTS=PTT
- In MMTTY, use EXTFSK or EXTFSK64 to select COM port. Cannot use logger at same time; rig has just one serial port.
ICOM IC-7610

- USB cable provides two virtual serial ports
- In IC-7610 **SET > Connectors > USB Send/Keying**:
  - Set USB Keying (CW) to USB1(A) DTR
  - Set USB Keying (RTTY) to USB1(B) DTR
  - Set USB Send to USB1(A) RTS or USB1(B) RTS
- In Logging Software, rig control COM Port (A):
  - DTR=CW, RTS=PTT
- In MMTTY, use **EXTFSK** or **ESTFSK64** to select second COM Port (B):
  - FSK=DTR, PTT=RTS
ICOM IC-7850, IC-7851

- USB cable provides *two* virtual serial ports
- In IC-785x **SET > Others** menu:
  - Set **USB Keying (CW)** to **USB1 DTR**
  - Set **USB Keying (RTTY)** to **USB2 DTR**
  - Set **USB Send** to **USB1 RTS** (CW) or **USB2 RTS** (RTTY)
- In Logging Software, rig control COM Port (USB1) set DTR=CW, RTS=PTT
- In MMTTY, use **EXTFSK** or **ESTFSK64** to select second COM port (USB2)
  - FSK=DTR, PTT=RTS
Yaesu FT-991

- USB cable provides *two* Silicon Labs virtual serial ports:
  - In Yaesu Menu, set
    033 CAT RTS: Disable (Turns off RS232 handshaking)
    060 PC Keying: DTR
    047 AM PTT SELECT: RTS
    071 DATA PTT SELECT: RTS
    076 FM PKT PTT SELECT: RTS
    110 SSB PTT SELECT: RTS
  - In Logging Software, rig control is via the “Enhanced” COM Port, CW / PTT via “Standard” COM Port: DTR=CW, RTS=PTT
  - In MMTTY, use **EXTFSK** or **ESTFSK64** with the “Standard” COM port: FSK=DTR, PTT=RTS
Kenwood TS-890

- USB cable provides *two* Silicon Labs virtual serial ports:

- Right click, Properties, Details tab, Location Path: USB1 is “Standard” Serial Port, USB2 is “Enhanced”

- In Logging Software, rig control is via the “Standard” COM Port
  CW / PTT / FSK keying may be assigned to DTR or RTS of either port

- **Menu 17 Virtual Standard COM Port RTS:** PTT
  **Menu 18 Virtual Standard COM Port DTR:** CW Keying
- **Menu 19 Virtual Enhanced COM Port RTS:** PTT
  **Menu 20 Virtual Enhanced COM Port DTR:** RTTY Keying
N1MM+ Contest Software

- CW Timing over USB is usually OK!
- Set DTR (pin 4) = CW, RTS (pin 7) = PTT
Win-Test Contest Software

- Set DTR (pin 4) = CW, RTS (pin 7) = PTT
MMTTY Setup Menu, **TX Tab**

- Set **Port** to **EXTFSK64**
MMTTY Setup Menu, **Misc** Tab

- Set TX Port to **COM-TxD(FSK)**, click **USB Port**
MMTTY USB Port Menu

- Set Processing Method to **C: Limiting Speed**

Processing method

- A: Normal
- B: Polling
- **C: Limiting speed**
- D: Polling and Limiting speed

Please try to test B, C, D, if you have a trouble in the USB-COM adaptor. (C)Limiting speed seems to be well.

OK  Cancel
EXTFSK Pop-Up Menu

- Select second COM Port, FSK=DTR, PTT=RTS
Serial Port Hardware Sharing

- In RS232 protocol, only **one** TXD line (Pin 3) can be connected between a PC and a Radio.
- No other device may connect to Pin 3 if a PC is connected.
- PC Polls radio on Pin 3 (TXD), Radio sends response on Pin 2 (RXD).
- AUTO INFO mode provides same output without PC polling.
- Multiple devices (SteppIR controllers, Band Decoders, Elecraft / ACOM / SPE amplifiers) may *monitor* the RXD line in parallel by only connecting to Pin 2.
Shameless Plug

- The N6TV “Serial Box” (S-BOX and S-BOX-USB w/FTDI) by N6TV implements parallel connections to RXD pin via standard D-SUB cables:

- S-BOXs provide four NPN keying circuits for rigs that do not have any RTS/DTR CW/FSK/PTT keying support (Yaesu FTdx5000, FT-1000MP, Kenwood TS-990s, TS-590s, ICOM IC-7700, IC-7800, etc.)
Serial Port Software Sharing

- Software sharing: multiple programs simultaneously access the radio’s rig control serial port
- Implemented by VE3NEA’s OmniRig software
- OmniRig may be used by Win-Test, Writelog, HDSDR, WJST-X, Log4OM, etc. for rig control
- NOT supported by N1MM+, N3FJP, others
- OmniRig owns the serial port, acts as traffic cop, no collisions or conflicts between applications
- Can I use VSPE instead? Maybe, but collisions / conflicts may occur
- CW / PTT / FSK Keying via OmniRig port not supported
Radios with USB and DE-9 connectors

- Elecraft K3: USB and Serial Port ("P3/RS232") do not operate independently (parallel TXD wiring)
- Kenwood TS-590S and others: USB and Serial Port operate independently
- ICOM USB and CI-V Ports (3.5mm, not DE-9) may operate independently (set USB CI-V Port to Unlink from [REMOTE])
- Provides possibility for two programs to poll radio at same time via independent serial ports, one USB, one DE-9 or CI-V.
USB connection to radio adds a new Windows Sound Card

- **USB Audio CODEC**
- Can be use for contest recording, voice keying, MMTTY / FT8 decoding
- Multiple “USB Audio CODEC” devices, which is which?
- Right click on Speaker icon, Open Sound Settings
- Scroll down and select **Sound Control Panel**
- Select **USB Audio CODEC** device that appears when you connect USB Cable
- Click **Properties**
- Label both the “Recording” and “Playback” devices
Labeling a USB Audio CODEC Device
Key Points to Remember

- Set `devmgr_show_nonpresent_devices` to 1
- Use the Windows Device Manager to manage and renumber COM ports
- Always uninstall Prolific devices and drivers
- Always change the FTDI Default Options
- Try CW, FSK and PTT via serial port pins
- Use DTR for CW/FSK, RTS for PTT
- Understand serial port conflicts and sharing
- Label your USB Audio CODEC devices
