Presentation Overview

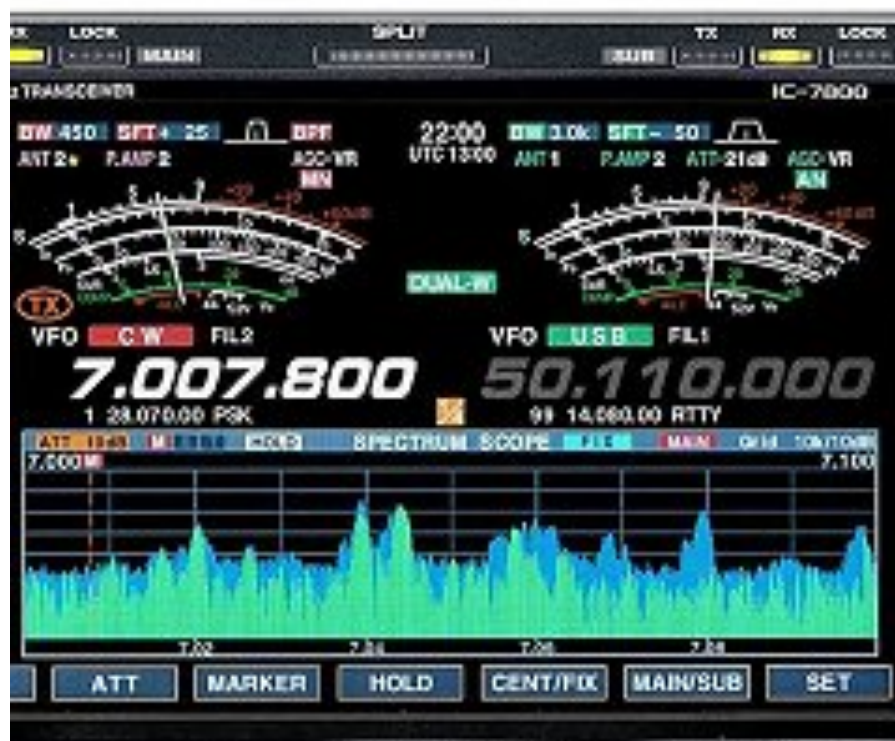

- Legacy “Panadapters”
- CW Skimmer’s SDR waterfall
- Current radios with waterfall displays
- Waterfall display advantages
- How to use waterfall in a contest
- Q & A

-
- The image shows a Kenwood SM-230 station monitor. The front panel features a green CRT display on the left, which shows a signal trace with a prominent peak. Above the display, the text "KENWOOD" and "STATION MONITOR SM-230" are visible. To the right of the display is a control panel with several sections:
- BAND SCORE:** Includes buttons for 1.6K, 1.6D, and 1.6S, and a "SCAN SPEED" section with buttons for AUTO, SLOW, and FAST.
 - FUNCTION:** A rotary knob with settings for BAND SCORE, X-TUNE, and SPLIT SCOPE.
 - RF ATT:** A rotary knob for RF attenuation.
 - VERTICAL:** Includes buttons for ATT (1/100, 1/50, 1, 100, 1K, 10K), a "VARIABLE" knob, and buttons for 100, 1K, and 10K.
 - HORIZONTAL:** Includes buttons for SWEEP RANGE (10-100Hz, 100-1kHz, 1k-10kHz, 10k-100kHz), a "VARIABLE" knob, and buttons for 100, 1K, and 10K.
 - TONE:** Includes buttons for 1000Hz, 100Hz, and 10Hz, and a "BALANCE" knob.
- At the bottom of the panel, there is a "POWER" switch, a "TONE INTENSITY" knob, a "FOCUS" knob, and several input/output connectors labeled "INPUT", "GND", and "TONE OUT".

Legacy Panadapters

- “Band Scopes” in Icom IC-781, IC-756ProII, IC-7800 (before V3.0), IC-7700, etc.

Spectrum Displays Hide Weak Signals

Legacy Panadapter Limitations

- Big signals dominate the display
- Weak signals very difficult to spot
- Signal peaks disappear, no history
- Difficult to find “clear spots” on a crowded band
- Limited zoom in or out
- Display jumpy, distracting
 - Signal averaging helps, but it also hides things

CW Skimmer Waterfall Limitations

- You only see 10 - 15 kHz of the band at most
- Scale is **fixed**, cannot “zoom” in or out, or tune smoothly
- Narrow 500 Hz CW filter – *not* useable on phone

Better Waterfall Displays

- The Elecraft P3 Panadapter

- Major improvement over legacy designs

Elecraft P3 + P3SVGA Option

- P3 resolution only 480 x 272 pixels
- P3SVGA: internal SVGA Large Screen Adapter
 - 1024 x 768
 - 1280 x 1024
 - 1440 x 900
 - 1920 x 1080
- Displays far more signals

P3 Built-in Display at 480 x 272

Old Icom IC-7800 firmware

Icom IC-7800 with V3.0 firmware

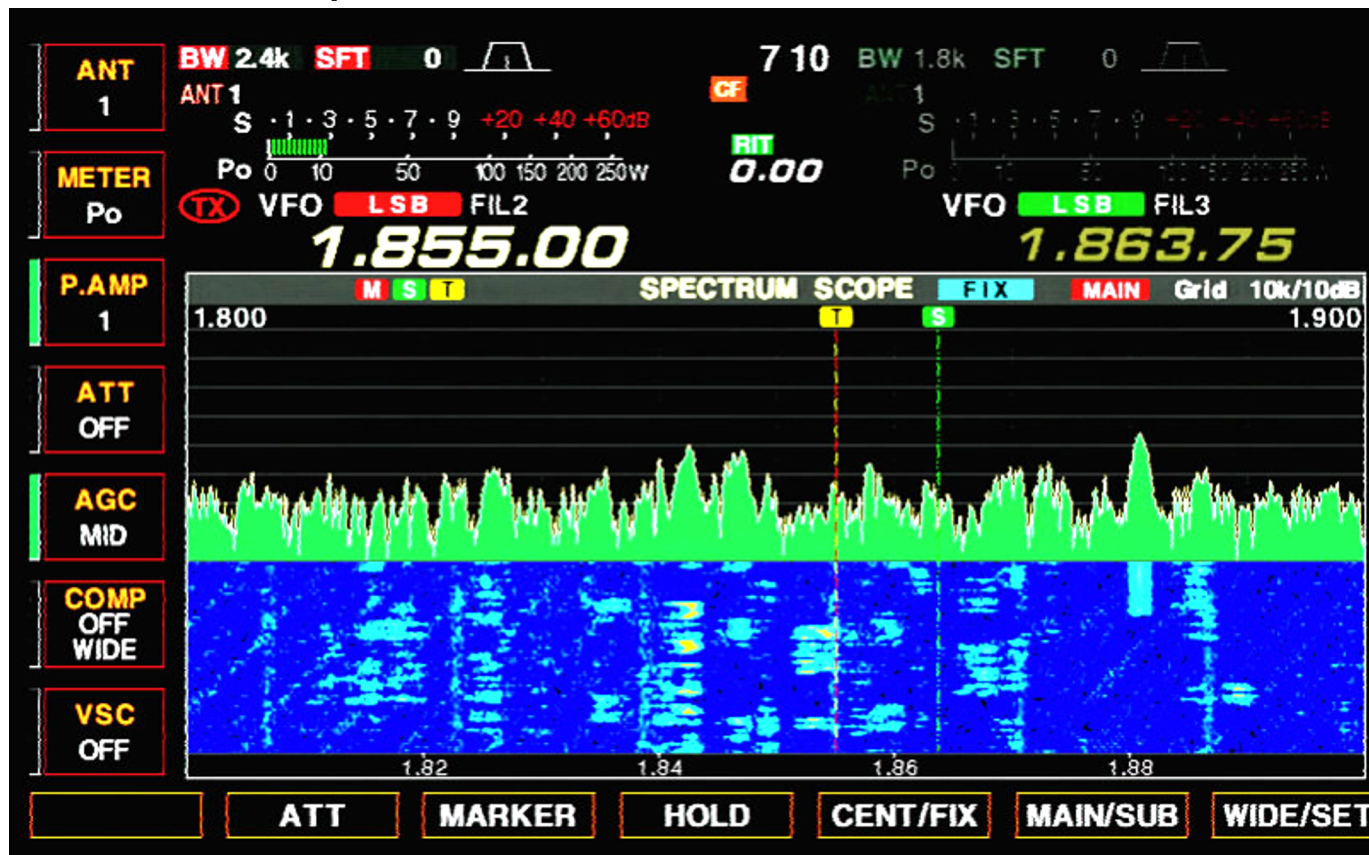

IC-7800 V3.0 Screen Shot

IC-7700 V2.0 Also Supports Waterfall Feature

- 800 x 480 (with or without external monitor)

Kenwood TS-990S

TS-990S screen shot

FlexRadio FLEX-5000™, FLEX-6700™

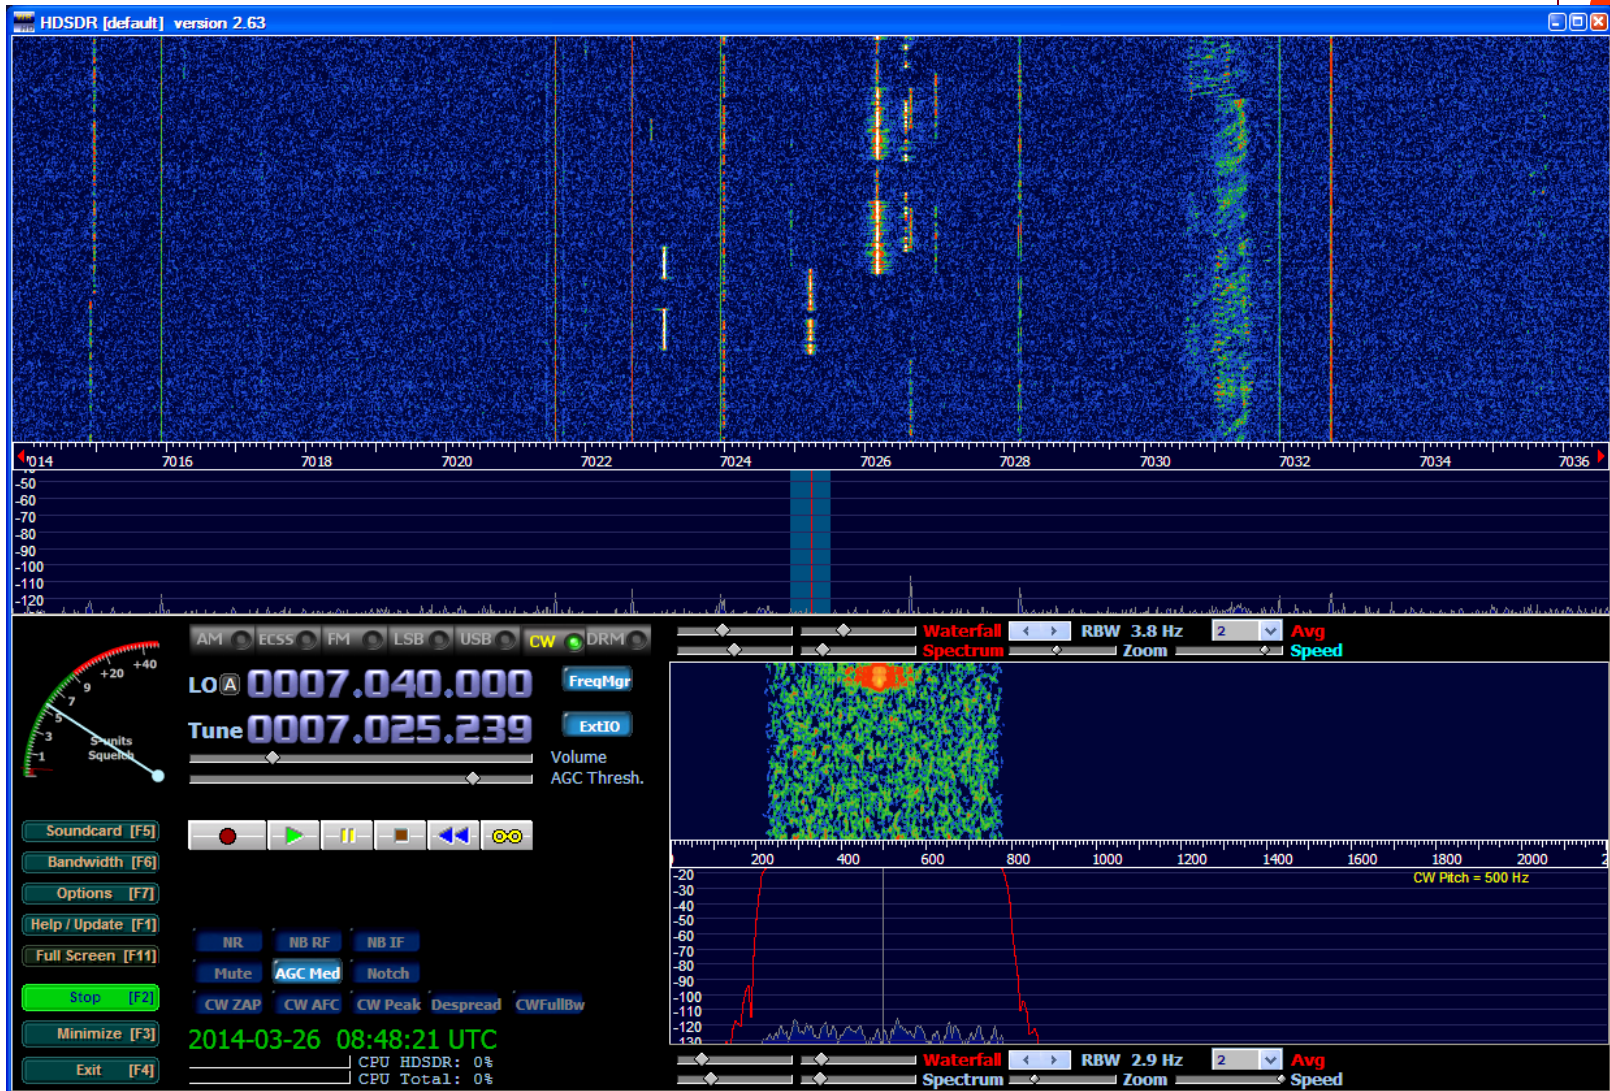

PowerSDR™ Software for FlexRadio

Winrad Software

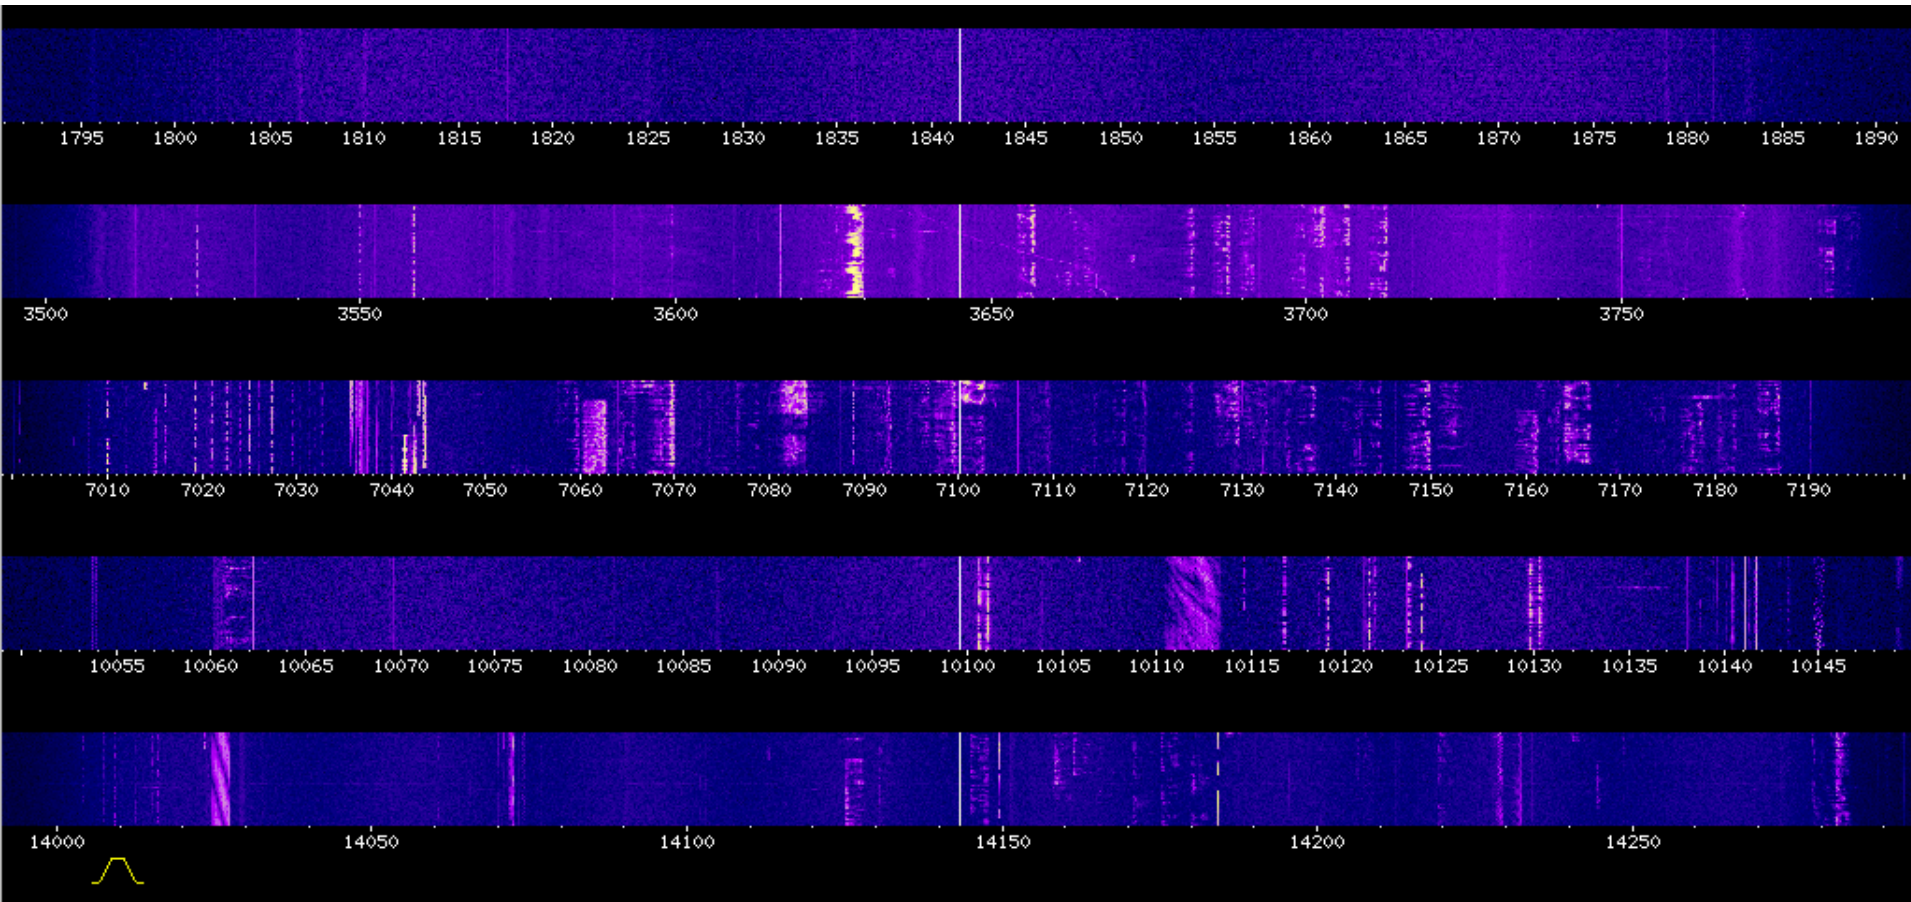

HDSDR Software

WebSDR: Waterfalls on the Web

- <http://websdr.ewi.utwente.nl:8901/>

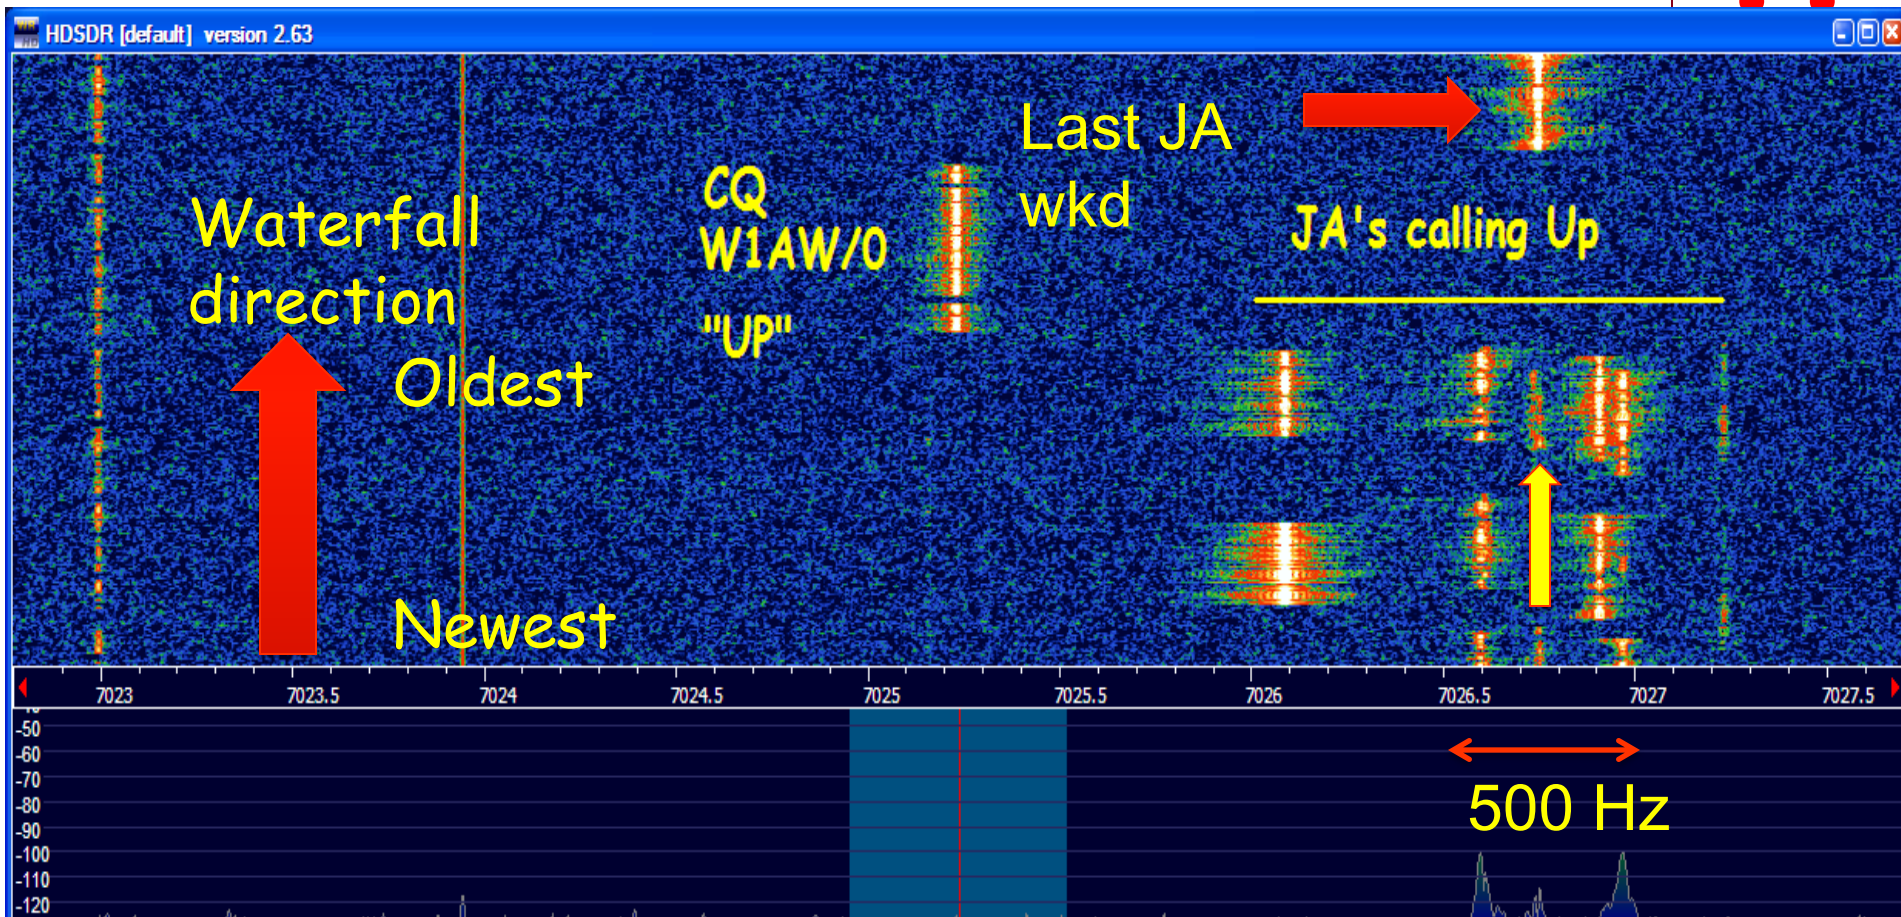

Waterfall Display Advantages

- “Click to Tune” – direct access using a mouse
 - IC-7800 V3.0, PowerSDR, HDSDR (but not K3/P3)
- Weak signals easy to spot (faint traces)
- Many zoom levels: 7.5, 15, 30, 60, ..., 800 KHz
 - Watch the whole band at once, or a small slice
- Find clear frequencies *fast*
- Find who the DX just worked, *fast*
- Spot the gaps in a crowded CW pileup

Listening “Up”? Not a problem

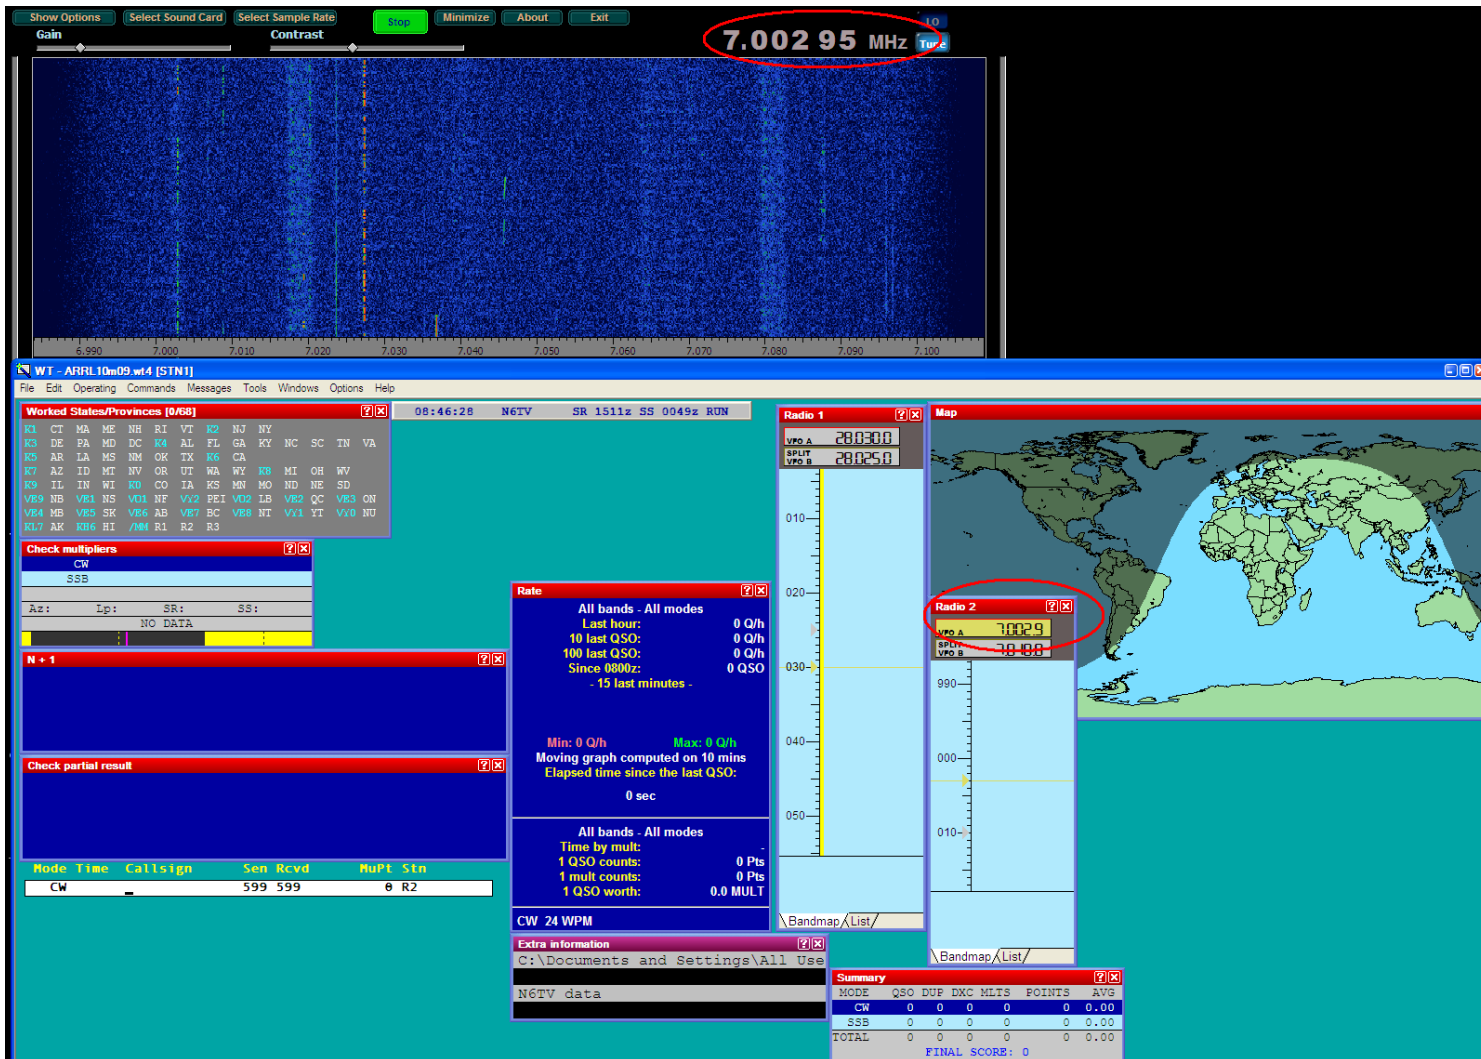

Who will W1AW/0 answer next?

Using Waterfall in a Contest

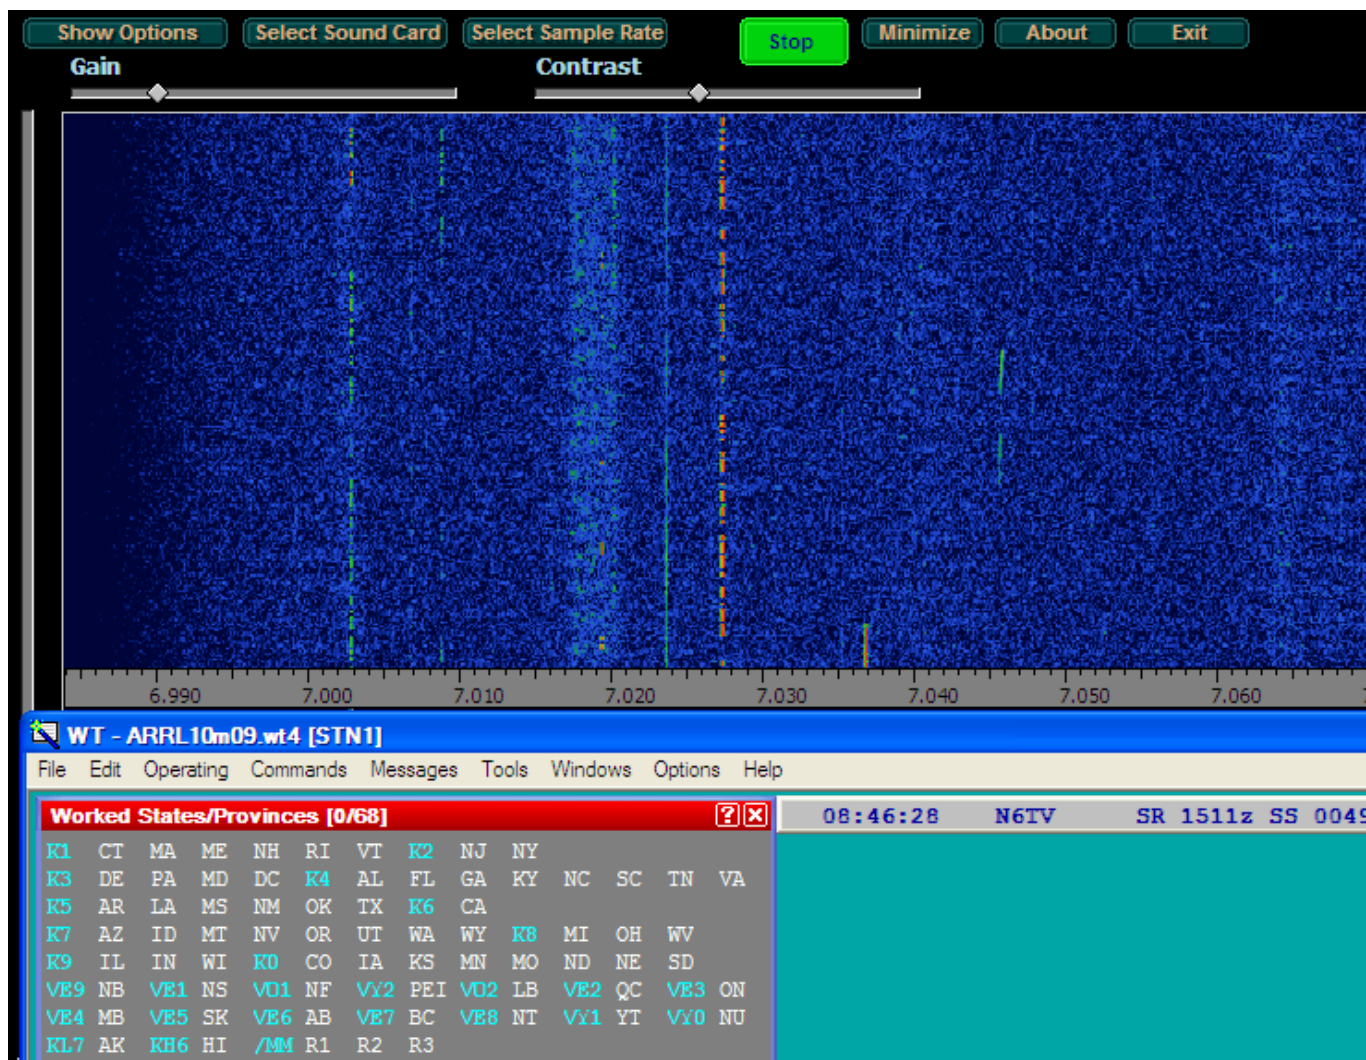

- Find clear spots to call CQ
- QRM? You can **see** where to move your VFO to minimize it
- Find “good spots to call” in a CW pileup
- During S&P, find the “next” signal fast (no more slow tuning)
- Position VFO B or 2nd receiver without having to *listen* to it
 - S&P while CQing, “SO2V” (single-op, two VFOs)
- Monitor overall band activity
- Keep an eye on the local competition

Winrad on Top, Win-Test on Bottom

Winrad & Win-Test (zoomed)

Waterfall Display *Disadvantages*

- Radios don't automatically jump from signal-to-signal like CW Skimmer (yet)
- Clicking on a signal with the mouse not as precise as tuning with VFO, must still fine tune, contest software loses focus
- Can be visually distracting to some
- **But, if you're *not* using a waterfall display in a contest, you're really operating "blind"**
- **A waterfall display is really the "killer app"**

Click-To-Tune with a “Legacy” Transceiver + SDR

Adding a Software Defined Radio (SDR)
to an SO2R Station

Drawing by N6TV@arri.net 31 May 2008

Use Omnirig support in Winrad or HDSDR to synch freq. with any transceiver

Demo of Winrad's Waterfall

- Perseus SDR used to make a wideband recording (122 KHz for 10 minutes = 300 MB)
- Demo will play back that recording and others
- To try the demo yourself, follow instructions at
 - <http://www.kkn.net/~n6tv>
